Education

Hebrew University of Jerusalem – Computer Engineering (B.Eng), 2005 – 2009

Work Experience

DataRobot, Inc.

Staff Software Engineer (Sep 2023 – Present)
Senior Frontend Engineer (Aug 2019 – Sep 2023)

DataRobot is the enterprise AI platform used by ~40% of the Fortune 50.

- Owned UI infrastructure, design system, developer tooling, and testing infrastructure used by ~70 frontend engineers across ~4M LOC of frontend code. Set standards and conventions across the org.
- Built agentic AI applications on the DataRobot platform: multi-step LLM workflows that combine models, tools, and data to solve real user tasks. Also helped customers clarify requirements, build applications, integrate them into their systems, and troubleshoot problems.
- Pushed AI tooling adoption across the company: ran workshops, coached colleagues, built shared AI agent skills, and set up guardrails and standards for AI-generated code.
- Led the accessibility work to make the huge product WCAG AA compliant, culminating in a published VPAT. Added axe unit tests, Lighthouse checks, agentic skills, QA review guidelines, and accessibility patterns in the design system so new features stay compliant.
- Designed and implemented the architecture to untangle complex data-heavy interfaces.
- Led the Decision Intelligence team and built its editor from scratch: a visual graph editor for composing business rules over ML models, for real-time and batch execution.
- Led the frontend on the Customer Delight team, working with product, design, and customer-facing teams to ship customer-requested features very quickly.
- Drove platform migrations on a live product while features kept shipping: Angular.js to React, Karma to Jest, Protractor to Cypress, and many smaller upgrades over the years.
- Delivered projects even when the path wasn't clear: wrote specs, planned milestones, kept teams aligned, and unblocked people.
- Mentored and supported engineers across teams: workshops, presentations, code reviews, design-system office hours, 1:1s, team planning, retros, and hiring interviews.

Skills: React, TypeScript, JavaScript, Python, Jest, Cypress, Vite, CI/CD, Design Systems, UI Infrastructure, Web Accessibility, WCAG, Agentic AI, LLM Applications, AI Coding Agents, Project Management, Mentoring

Definiens AG (AstraZeneca)
Senior Full Stack Developer
Apr 2017 – Jul 2019

Owned and developed Insights Analytics, a customisable interactive dashboard platform that enabled company scientists to turn raw data and research findings into tailored visual insights for individual customer projects. The tool became one of the product's key sales differentiators and a major competitive advantage against competing solutions.
Skills: Angular, Medical Software, Plotly, Balsamiq, Python, Pandas, TypeScript, Product Management

Netletix GmbH (Mediengruppe RTL Deutschland)
Senior Web Engineer / UX Tech Lead
Dec 2015 – Apr 2017

Developed an ad campaign management app with live preview functionality, eliminating the need for direct codebase access. Led technology migration (Google Publisher Tags), built an efficient ad library for targeting and tracking, and managed the development process, including a team of interns.
Skills: Node.js, Angular, Project Leadership, TypeScript

TrustYou GmbH
Software Engineer
Jul 2014 – Dec 2015

Developed a B2B web application, used by more than 15000 hotels around the world to monitor and manage their online reputation.

Sizmek (formerly MediaMind)
Full Stack Software Engineer
Apr 2012 – Jul 2014

Built an analytics dashboard bridging TV and online advertising data – two worlds the industry was just starting to connect.
Skills: JavaScript, .Net, Hadoop

Israel Defense Forces, Department of Information Technology
Software Developer (details classified)
2009 – 2012

TENS Technology
SEO Engineer at R&D department
2007 – 2009

SEO engineer and researcher.
